Subject: Application for Full Stack Engineer

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Engineer position. With more than seven years of professional experience in PHP, Laravel, Vue.js, Angular, MySQL and Redis, I have delivered enterprise applications for government and commercial organizations, from secure REST APIs to complete workflow-driven platforms.

I currently work as a Software Engineer at the Punjab Local Government & Community Development Department (LG&CD) on the PMIU-ITBMS project. My work there covers:

- Enterprise applications and RESTful APIs with Laravel and Angular.
- Authentication, authorization and role-based access control.
- Budgeting, reporting and workflow automation modules.
- Query optimization and background processing with Redis, Queues and Jobs.

Before this, I was a Senior Software Engineer at Clebiz (Denmark), where I built customer, invoicing and workforce management modules for a multi-tenant ERP SaaS platform. Earlier, at the Punjab Information Technology Board (PITB), I spent five years delivering government information systems with Laravel and Vue.js, including integrations with Firebase, Twilio, Pusher and government APIs.

Outside of client work, I built Lapzo Store, a full-stack e-commerce platform, and I maintain several Laravel and Vue.js projects on GitHub. They show how I approach clean architecture, responsive interfaces and maintainable code. You can see them at luqmanarshad.github.io.

I would welcome the opportunity to discuss how my experience can contribute to your team. Thank you for your time and consideration.

Sincerely,
Luqman Arshad
